

BIOCUMIN

Antiviral, Antibacterial & Antioxidant, Helps prevent Coccidiosis

WHAT IS BIOCUMIN

Biocumin is curcumin extract. The active substance in turmeric oil are curcuminoids, aromatic turmerones curlone and alpha and beta turmerones. Curcuminoids have wide spectrum of biological activities that include antioxidant, antibacterial, antifungal, antiprotozoal, antiviral, anticoccidial, and anti-inflammatory properties.

Curcumin extract is the replacement of antibiotic growth promoters with other safe and natural alternative can be an important objective for the poultry industry.

Benefits:-

- Greater bodyweight gain, improves growth & productivity.
- Improves feed conversion ratio.
- Supplementation of layer diet with curcumin extract increases egg production, egg weight, egg mass and increased the yolk index.
- Studies also show that Biocumin has the ability to stimulate the digestive system, increases the secretion of intestinal lipase, amylase, trypsin and Chymotrypsin enzymes hence boosting digestibility.
- Dietary supplementation of Biocumin prevents the harmful effect of Aflatoxin B1 on the immune system, showing the humoral immune stimulatory potential in poultry.
- Boosts immunity.
- Improves meat quality.
- Improves carcass traits total cholesterol & fat content in breast required meat of broiler chicken.

Dosage :-

Broilers, Commercial Layers and Breeders
In all stages of growth :- 500 g to 1 kg / ton of feed
Aquaculture :- 1 to 2 kg / ton of feed

Usage :-

Can be added directly to the mixture or mix required quantity with 5 kg soya Doc and then add into the mixture.

Storage :-

24 months in original packing

Shelf Life :-

Keep in a well ventilated dry place away from sunlight.
Gives wonderful bright yellow colour to the feed
