

EnraCareLiquid

Enramycin oral solution 10%

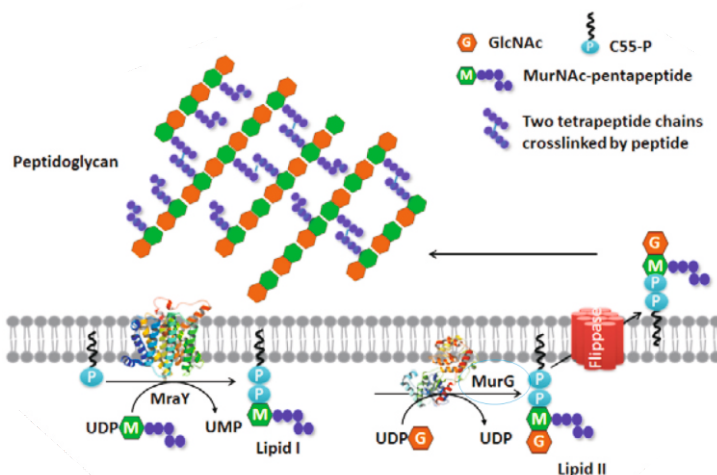

COMPOSITION

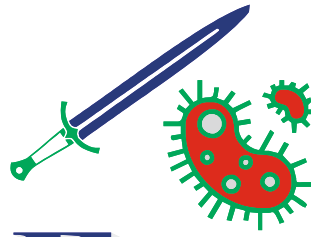

Each 100 ml Enracare liquid contains 10 ml of Enramycin, a polypeptide, which has a strong action against Gram positive bacteria (*Clostridium perfringens*).

- Improves flock intestinal health, resulting in better feed efficiency and growth performance.
- No side effects; cost effective; consistent results.
- Difficult to form resistance.
- It has no direct action on genetic codification of the bacteria but it only interrupts one of the phases of the normal metabolism of membrane formation.

MODE OF ACTION

Enramycin acts as an inhibitor of the enzyme (MurG), which is essential for wall biosynthesis in gram +ve bacteria. MurG catalyzes the transglycosylation reaction in the last step of peptidoglycan biosynthesis. Hence inhibiting this step greatly compromises cell wall integrity leading to cell lysis.

EnraCareLiquid

Enramycin oral solution 10%

- Highly effective microbial additive against Gram-positive bacteria mainly *Clostridium perfringens*.
- Growth promoting effect.
- Highly effective to control necrotic enteritis.
- No cross-resistance with existing antibiotics.

INCLUSION RATE

Chicks and Grower :-

→ 0.5 ml to 1 ml / 2 L of drinking water

Layer & Broiler finisher :-

→ 1 ml to 2 ml per L of drinking water
Or

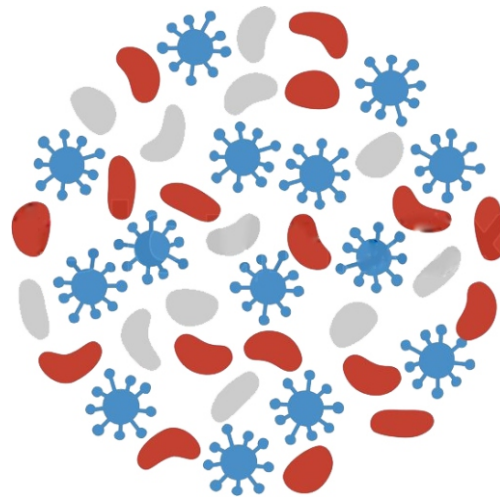

As advised by veterinarian

WITHDRAWAL PERIOD

7 days, avoid use in laying hens.

PRESENTATION

1 L & 5 L

A product of:

Biochem Pharma
All we need is a healthy world
